Abstract (en)
[origin: WO02053856A1] The invention relates to a façade and/or a roof comprising a metal framework. Preferably, the case bays of said metal framework can be provided with insulating glass panes. The vertical member profiles and the cross member profiles comprise sealing grooves (5, 6, 9) for sealing strips (10, 13, 13.1) on which said insulating glass panes (102) can be supported. The bottoms of said sealing grooves (5) for the sealing strips (10) and, preferably, the bottoms of the receiving grooves (8) for the leakage water of the cross member profiles (2) rest on the sealing grooves (6, 9) of the sealing strips (13, 13.1) of the vertical member profiles (1). The single-part or multi-part sealing strips (13, 13.1) of the vertical profiles are higher than the sealing strips (10) of the cross member profiles in such a way that the sealing strips (10, 13, 13.1) of the cross member profiles and the vertical member profiles occlude in a common plane. Said façade and/or roof is characterised in that at least one of the sealing strips (10, 13, 13.1) of the cross member profiles (1) and/or the vertical member profiles (2) comprises at least one drainage channel, preferably a condensate channel (11, 18).
