Abstract (en)

[origin: WO0251073A2] The invention relates to a method for controlling links in a communication system which is characterized in that, if a link is to be established, a message is transmitted that contains information on the transmission format. Once it has been determined if there is sufficient transmission capacity for the desired transmission format, the link data and priority attributes are used to examine if existing links can be stopped in favor of the desired link.
