Abstract (en)
[origin: EP1347425A2] The method involves detecting current position data for a vehicle using a position detection system, using this to check whether by driving onto a road (FA1,FA2) at least one predefined driving point (G1,G2) will be passed, whereby the vehicle's direction of travel (R1,2) is determined after it passes a driving point, and checking whether the vehicle is traveling in a direction positively identifying a wrong-way driver. AN Independent claim is also included for the following: a traffic monitoring system.
