Abstract (en)  
[origin: EP1347534A2] The device is made up of at least one piece of reinforcing steel (1) for welding to the reinforcing steel embedded in the concrete and of at least one flexible insulated conductor such as a copper cable (2) for connection to the system to be earthed. For bridging an expansion joint the conductor is connected to a piece reinforcing steel at both ends. AN Independent claim is also included for the following: an earthing system with steel reinforcement embedded in concrete to which at least one inventive device is welded and a method of manufacturing an earthing system.
