Abstract (en)

[origin: DE10100385A1] Treatment device for therapeutic influencing of parts of a patient's body in which they are irradiated with high frequency carrier radiation with low frequency modulation. According to the invention the modulating frequency lies between 0.5 and 40 Hz. The treatment device has a further sound generating device (13) for acoustic treatment with a low frequency oscillator step (4), an amplifier (16) and a loudspeaker for treatment of a patient's tissue.
