Abstract (en)  
[origin: WO02052132A1] The invention relates to a cooling system for a motor vehicle, comprising at least one coolant pump (30), which is provided for circulating a coolant in the cooling system, and a main cooler (10), which has at least one main cooler inlet (11) and at least one main cooler outlet (12). The main cooler inlet (11) is connected at least temporarily to a coolant outlet (24) of a combustion engine to be cooled (20), while the main cooler outlet (12) is connected to a coolant inlet (23) of said combustion engine (20). According to the invention, at least one first aggregate (60, 80) to be cooled is connected parallel to the combustion engine and/or the main cooler (10).
