Abstract (en)  
[origin: WO02052195A1] The invention relates to a mobile cremation device, comprising a combustion chamber (1) which can be opened and closed with at least one opening (8, 9), at least one hearth (6, 7) which can be activated and deactivated, and a device for removing (10a) and circulating (10b) the waste gas that is formed during the combustion of at least one unit. Oxygen can be added to said waste gas to be circulated in at least one mixer and the mixture of circulated waste gas and oxygen produced in said at least one mixer can be conveyed to the hearth. The device for removing and circulating the waste gas that is formed during the combustion of at least one unit comprises a condenser.
