Abstract (en)
[origin: WO0251074A1] The invention relates to a method which uses a global service profile (16). Said global service profile (16) contains features characteristic of telephone profiles (P1, P2) as well as features characteristic of packet network profiles (P3, P4). The global profile (16) allows for the fast and simple establishment of a combined access to a switched data transmission network and to a packet-switched data transmission network.
