Abstract (en)

[origin: EP1348348A2] A passage 3 that extends from the upper pocket 1 to the lower outlet 2 is formed. The lower end of the passage 3 is equipped with a receptacle 4, which is positioned immediately above the outlet 2. At a location upward of the receptacle 4, another outlet 5 that opens to one side of the passage 3 is formed. The outlet 5 and the lower outlet 2 are connected to each other via an outlet passage 6. ¶Effects¶  
<??>When a cell phone T is dropped in from the upper pocket 1, it glides down inside the passage 3 and is firmly received by the receptacle 4 established at the lower end. When the wearer of the jacket inserts their fingers through the lower outlet 2 and pushes up the receptacle 4, they can easily push out the cell phone T held inside through the outlet 5, which opens to one side of the passage 3. They can then take out the cell phone T from the lower outlet 2, which is connected to the outlet 5 via an outlet passage 6. <IMAGE> <IMAGE>
