Abstract (en)

[origin: EP1348815A1] The fitting consists of an angled connector (11) joined to the free end of a pipe (2) located between the partitions (4, 5) of a hollow wall and emerging through an aperture (9) made in the front partition. A collar (15) on the connector is fastened to the back of a thin rectangular plate (17) that covers the hole and is fixed to the outside of the partition. The outer end (16) of the connector, which has a threaded inner surface (14a), projects through a hole in the middle of the plate and is surrounded by glazed tiles (25) fixed to the partition's outer surface, concealing the plate, which has holes in it for tile adhesive. An Independent claim is also included for the connecting procedure.
