Abstract (en)
[origin: US2004079046A1] Described is a covering element for buildings comprising at least one, preferably fixedly arranged support apparatus and at least one film pillow that displays two outer film layers, between which is formed at least one hollow space closed in a gastight manner and containing gas, especially air, and displays a fastening section in which the two outer film layers are connected to each other and by which section the film pillow is anchored to the support apparatus. The special aspect of this covering element for buildings consists in the fact that at least one thermally insulating element is arranged in the fastening section of the film pillow and in the fact that the two outer film layers are spaced apart from each other by the thermally insulating element and thereby rest upon the latter.
