Abstract (en)
[origin: WO0240318A1] The invention concerns a trim panel (2) for a motor vehicle door structure (1), comprising sealing means (15) arranged such that when the panel (2) is mounted, the latter hermetically separates the inside of the door structure forming a wet zone (16) from the inside of the vehicle passenger compartment forming a dry zone (17). The panel comprises on its surface designed to be oriented inwards of the passenger compartment a hollow portion (39) for receiving an electric motor (37) of a window control switch (25) and openings (40) arranged in said hollow portion (39) to enable mechanical coupling between said motor (37) and a window-lift mechanism (33) on either side of the panel (2) such that when assembled, the motor (37) is located in dry zone (7) and the window-lift mechanism (33) in wet zone (16).
