Abstract (en)
[origin: WO0248021A1] The invention concerns a device, designed to be used in horse riding, consisting of hand grips (1) linked to a collar (5) enclosing a horse's neck. The invention is characterised in that the hand grips (1) are compact and do not hinder the use of reins, the element linking the hand grip (1) to the collar (5) partly consists of an elastic (3) and the collar (5) is fixed midway on the neck so as to allow the hands translational and lateral freedom. The device enables to avoid faulty handling on the experienced rider's part, enables the beginner to find the right balance and controls the horse's mouth.
