Abstract (en)

[origin: WO0240668A2] The invention relates to DNA sequences, which code for at least one PYD domain, to expression vectors, which contain DNA sequences of this type, to host cells, which are transformed using expression vectors of this type, to purified gene products of said DNA sequences, to antibodies directed against said gene products, and to methods for isolating and/or expressing said gene products. The invention also relates to the use of said DNA sequences or of their gene products for treating inflammations.
