Abstract (en)  
[origin: WO02055722A1] The invention relates to a method for producing solid materials, particularly building materials, wherein vegetal source material is ground, fermented and at least partially dried. The vegetal source material is ground into fine grains, fermented by adding microorganisms, preferably yeast, and dried. Non-fermenting parts of the vegetal source material are bonded when drying by substances from the microorganisms, so that a solid ecologically safe material can be produced without conventional adhesives.
