Abstract (en)
[origin: WO02052089A1] The invention relates to a cupboard-like washing machine (1) comprising a conveyer belt (3) for moving the item to be washed (5) in a cycle during a drying process. The dryer can be embodied as an air circulation dryer or an air evacuation dryer. Moving the item to be washed (5) using the conveyer belt (3) reduces the drying time. A rinsing container which is arranged in the rear wall of the housing (2) is used as a heat exchanger (14).
