Abstract (en)

[origin: FR2819321A1] The invention concerns a method for processing and accessing data in a computerised reservation system, and a computerised system for its implementation. The invention is characterised in that it consists: in creating at least a cache (9a, 9b) in the server portion, said cache (9a, 9b) containing reservation data; adding data to the cache (9a, 9b) by transfer from at least an inventory setup (I); creating an interfacing application (18) between the cache (9a, 9b) and the client application(s) so that the user can address requests and receive data in response. The invention is applicable to computerised reservation systems in particular in the field of transport, travel, and accommodation.
