Abstract (en)

[origin: EP1350634A2] Molding for producing books with rounded spines comprises a frame (3, 5) forming a rectangular inner chamber, and a number of height-adjustable slats (4) arranged next to each other in the inner chamber perpendicular to the frame plane. Preferred Features: Guide bolts (2) penetrate the slats in control curves (4a) formed as slots. Displacement of the slats in the profile forming direction perpendicular to the frame plane is produced by longitudinal movement of the slats in the frame plane. The profile surface can be convex or concave. The edges of the slats facing the profile surface are rounded or have sharp corners.
