Abstract (en)
In order to provide an airbag apparatus in which gas from a gas generator can be prevented from directly colliding with an airbag thereof, thereby easing the requirements of heat resistance on the airbag, a gas generator (14) is inserted through an aperture (30) of an airbag (12) and is fixed to the periphery of the aperture (30) by a band (50) around them. A retaining member (16) is fitted around the gas generator (14) and is fixed to a casing (18) by bolts (54). Both sides and a lower side of a portion of the gas generator where gas ports (34) are formed are surrounded by side walls (40b) and a bottom (40a) of the retaining member as a gas-flow deflecting member. Gas spewed through gas ports (34) are prevented from directly colliding with parts of the airbag (12) near the gas ports (34). <IMAGE>
