Abstract (en)

[origin: EP1350880A1] The device has a rotating cylindrical drum that accommodates the wash with at least one drive element on its casing for at least partly circulating the wash. The drive element extends from its base joined to the drum to its top surface (6) remote from the drum. The top surface or upper edge has at least two different angular regions when projected onto the rear wall of the drum. AN Independent claim is also included for the following: a method of washing washes in a washing machine.
