Abstract (en)
[origin: EP1351366A2] The light has a light source and an electronic voltage adapter with a light control connector(s) and a connection for supplying voltage to the light source. The connections can be connected to a suitable control system or voltage supply lines. A monitoring device connected before the adapter connections has control system and supply line inputs/outputs and a control unit(s) that sends at least data via the control system and/or supply lines. The light has a light source (2) and an associated electronic voltage adapter (3) with at least one connector for light control and a supply connection for supplying voltage to the light source, whereby the connections can be connected to a suitable control system (6) or voltage supply lines (7). A monitoring device (8) connected before the electronic voltage adapter connections has inputs and outputs for the control system and supply lines and at least one control unit (11) that transmits at least data via the control system and/or supply lines. AN Independent claim is also included for the following: a monitoring device for a light.
