Abstract (en)

[origin: WO02054884A1] The invention relates to a method for producing protein products which can be emulsified from plant seeds such as oilseed, particularly from soya beans. The plant seeds are crushed and are transported to a de-oiling step and supercritical CO₂ is added as a solvent to the crushed plant seeds and crude oil and a de-oiled residue containing the emulsifiable protein products are obtained during a separation step.
