Abstract (en)  
[origin: WO02055006A1] The invention relates to a therapeutic and training device for the shoulder joint (43), comprising a body support (21) with two shoulder brackets (27), one for each shoulder, attached to a pivot joint support (22), which may be pivoted about a vertical axis of a shoulder pivot joint device, each comprising an arm bracket for connecting to an arm (42, 48) at a separation from the pivot joint support, connected to the shoulder bracket (27) and rotating about a horizontal axis (37) around an upper arm pivot joint device (30). The shoulder bracket and/or the arm bracket have a motion connection such that a pivot movement of the one shoulder bracket or of the one arm bracket causes a pivot movement of the other shoulder bracket or the other arm bracket.
