Abstract (en)

[origin: WO0245710A1] The present invention relates to compositions and methods for treating a human patient afflicted with a neuropsychiatric disorder. Specifically, the invention provides for compositions and methods of modulating or antagonizing the activity of neuronal NMDA receptors, wherein such antagonistic activity is capable of modulating the glutamate induced excitatory response of the neurons, thereby inhibiting an excitotoxic effect, promoting a neurotrophic effect, and thereby providing a therapeutic effect that treats the neuropsychiatric disorder.
