Abstract (en)

[origin: WO02057167A1] The invention relates to a device for receiving printing products (6, 7, 8, 9) in a transfer zone (37). Said device comprises at least one receiving element (1) that has a support element (2), a base element (3) and a bearing element (4), said support element (2) and base element (3) being able to support printing products (6, 7, 8, 9) laterally and from below and the bearing element (4) being able to receive printing products (6, 7, 8, 9) astride said element. According to the invention, a deflection element (5) is provided which can preferably deflect a printing product (6, 7, 8, 9) that is fed to the receiving element (1), in such a way that at least one part of the fed printing product (6, 7, 8, 9) is positioned on the side of the received printing products (6, 7, 8, 9) facing away from the support element (2).
