Abstract (en)

[origin: WO02057533A1] An apparatus for sensing a dryness degree in an exhaust type clothes dryer and a control method using the same, includes a electrode sensor for sensing a clothes drying state based on the humidity of the clothes in the drum, and a thermistor for sensing the temperature of the air discharged after drying the clothes. By comparing the clothes drying state and discharged air temperature, the operation of the dryer is controlled, so that the drying of clothes can be accurately performed, thus to improve efficiency and performance of an exhaust type clothes dryer.
