Abstract (en)

[origin: WO02057564A1] The roof window assembly comprises a main frame component and a window component (501) including a glazing element. In order to reduce the influx of light an external screening accessory (500) is provided. The screening accessory comprises an elongate housing (519) extending in parallel with the top and bottom members (513) of the frame and from which a screening member (531) is retractable by movement parallel to the side members (507, 514) of the frame. An end member (532) connected with a free end of the screening member extends throughout the width of the window frame and includes engaging means (533) at either end of the end member for engagement with a transverse inwards recess (511) in the outer side of each side member (507, 514) of the window frame.
