Abstract (en)
[origin: WO02056209A1] The invention relates to the interactive implementation of innovation processes in a computer network (8), whereby the individual steps of an innovation process take the form of modules (9, 10) which are interconnected by means of standardised interfaces and respectively comprise at least one sub-program. When a step is carried out, the required sub-programs are automatically called in and the output data of the sub-programs is transmitted to a central data bank (1), to other sub-programs of the same module and/or to at least one other module. FIG.1. 9. workflow 25. data network 10. project management 1. central data base
