Abstract (en)  
An adjustable braking device (1; 51) for cyclist training, to be mounted on a movable bicycle (30), comprises a roller (11) which engages a wheel (25) of the bicycle (30), a hydraulic pump (13) connected to said roller (11) and having the outlet connected to a tank (21) containing a viscous fluid, and regulations and control means. The regulation and control means comprises an adjustable maximum pressure valve (20) for allowing the passage of the fluid from the pump to the tank when the fluid pressure reaches a predetermined value, a relief valve (22) to reduce the fluid pressure in the hydraulic circuit, and a flow control valve (23), positioned between said pump (13) and said pressure regulating valve (20). <IMAGE>
