Abstract (en)

[origin: EP1352852A1] The device for connecting a vessel to at least two associated units comprises a connector manifold which has at least two connections for the associated units and is connected to the vessel with form and/or mechanical locking. The manifold has a fastening plate (28) which conforms to the shape of the vessel. The fastening plate has a section (10) with a shape corresponding to a bearing area around the opening (12) of the vessel. The opening is closed off by the connector manifold. The shape of the fastening plate may be straight, concave or convex.
