Abstract (en)

[origin: EP1353415A1] The bus bar has a number of uninsulated conducting wires in parallel grooves in an insulation carrier. The end piece (20) can be fitted onto the bus bar in the longitudinal direction for attachment to the bus bar and has an adjustment arrangement that converts the fitting motion into a displacement motion for at least one of two adjacent conducting wires so that the end regions of the wires are bent out of the groove in the insulation carrier.
