Abstract (en)  
[origin: US6983847B2] A needle package ( 1 ), particularly for packaging needles (N), has a hold-down device ( 23 ) that is disposed in an interior space (I) and serves to secure the needles (N) in the interior space (I). The hold-down device ( 23 ) is formed, for example, by one or two resilient elements, such as clamping lips ( 24, 25 ), which extend transversely to the needles (N) through the interior space (I). The clamping lips ( 24, 25 ) are disposed on the inside of a segment of the package ( 1 ) that is moved toward the needles (N) after the package has been filled, so the clamping lips ( 24, 25 ) rest against the needles (N). The segment can be formed, for example, by a lid segment ( 12 ) that is seated to pivot on the receiving area ( 3 ) of the package ( 1 ). This package can be filled particularly simply, and is suitable for various types of needles.
