Abstract (en)
[origin: WO02053817A1] The invention relates to a double bed and single bed circular knitting machine with a cylinder bed (3) coaxially seated on a support (2) of the cylinder bed (3) which is in its turn seated on the machine bed (1) surrounding the support of the cylinder bed in which the machine comprises means for centering the cylinder bed (3) and as the case may be, also the needle dial (19) and/or another mechanism arranged over the cylinder bed (3) and in which the cylinder bed (3) of the cylinder and the needle dial (3, 19) can be mounted into, and removed from, the machine by movements substantially normal the machine axis (6). The support (2) of the cylinder bed (3) carries removable and or slidable positioning means reaching over the bearing surface for the cylinder bed (3) on the support (2), the positioning means being removable and/or slidable below the level of the bearing surface for the cylinder bed (3) on the support (2), and the bearing surface for the cylinder bed (3) on the support (2) being made void of steps and lugs obstructing the lateral displacement of the cylinder bed (3) in the direction substantially normal to the machine axis (6).
