Abstract (en)
[origin: WO0245263A1] The invention concerns a filter produced in integrated circuit by means of resistive (R) and capacitive (C11, C12, C13, C14, C21, C22, C23, C24) elements and comprising, for ground connection, at least two separate bond pads (61-68) of a chip (69) not directly connected between them and designed to be connected individually to at least two separate terminals (71-78) of a housing (70).
