Abstract (en)

[origin: WO0245367A1] The present invention relates to a communications system for home and small office and to a gateway and an application server within said system. The object of the invention is to achieve an improved communications system and to enable low cost terminal units. Within the communications system, the gateway comprises a global interface to a broadband Internet access network, a wireless local interface to a high bit rate local area network, and a wireless local interface to a low bit rate local area network. The application server manages the communication system in a centralised way.
