Abstract (en)

[origin: WO0232134A1] The invention relates to a method and a system for producing an interactive television programme. Electronic messages (SMS) are transmitted from viewers (MS1, MS2) to a server (1) by means of a communications service of a public telecommunication network (13, 14). The server (1) automatically converts the messages into programme contents wherein the messages are arranged to be displayed on a television screen in a desired order and format. Next, the programme contents are broadcast to subscriber stations (11, 12) through a television broadcasting system (9).
