Abstract (en)

[origin: CA2435361A1] The aim of the invention is to increase attractiveness of hearing aid system s. User-defined sequences are inputted into a generator unit (9) on the hearing aid. A respective acknowledgement signal (Q) is transmitted from the generat or unit (9) to the electro/mechanical converter unit (5) of the hearing aid for acknowledging an action having been carried out on the hearing aid.
