Abstract (en)

A sheet substrate (50) comprises a base sheet (52), a first adhesive layer (54) and a print coating (56). The print coating (56) comprises a plurality of respective compositions (56a, 56b, 56c, 56d) each composition comprising a graffiti resistant barrier substance and a different colour pigment. The graffiti resistant barrier substance is preferably a 'two pack' type of graffiti resistant paint product. <??>The multi-laminate film (50) is manufactured by first placing the base sheet (52) on a screen printing apparatus and applying a first composition (56a) by the screen printing process described above. This operation is repeated for the other compositions (56b to 56d) so forming the print coating (46). <IMAGE>
