Abstract (en)  
[origin: GB2385834A] A mounting arrangement for releasably mounting an air bag unit on a steering wheel includes a mounting plate which defines apertures 21-24 to receive the feet (40-43, figure 3) of an air bag unit. The plate is provided with a spring 31 mounted to the underside of the plate and being retained in position by a plurality of guide elements 25-28, where the spring extends across the apertures 21-24 to provide a snap-action fastening for the feet of the air bag unit. If the spring is moved in a predetermined manner (figure 4), parts of the spring are guided by the guide elements 25-28 so that they no longer extend across the corresponding apertures 21-24 thus enabling the air bag unit to be released.
