Abstract (en)

The invention relates to a method and device for adjusting the diameter of the winding body (5) of a pre-unwinding device for feeding yarn to a weaving device, which device also comprises: a central, rotatable shaft (2) disposed in a housing; a winding body (5) surrounding said central shaft and having a yarn entry side and a yarn exit side, whose diameter is adjustable in a plane perpendicular to the central shaft (2), means for adjusting the diameter of the winding body, as well as a winding arm (1) connected to said central shaft for winding a yarn drawn off a supply spool onto the winding body in side-by-side, separated or unseparated windings during operation through rotation of the central shaft. <??>In accordance with the invention, the diameter of the winding body is adjusted through rotation of the central shaft. <IMAGE>
