Abstract (en)  
A seal with anti-theft device for articles having slender portions, that comprises a hollow body (12) containing an electronic signaling component (13a) and forming a contact plane for a slender portion of an article to be protected, a pair of parallel and mutually opposite guides (15) for a substantially bridge-shaped slider (21) protruding from the body (12), the slider having a flat portion (22) from the ends of which mutually parallel and facing wings (23) protrude at right angles; the hollow body (12) and the slider (21) are coupled through irreversible engagement elements, and the slender portion is retained between the plane (22) and a parallel plane formed by the slider, the engagement elements comprising a plate (17) that protrudes from the body (12) parallel and internally to the guides (15), portions (16) having a sawtooth surface formed on the plate (17) at the outward face, and on the inward face of each one of the wings (23), respective complementary sawtooth portions (24) for engaging a corresponding one of the portions (16) having a sawtooth surface. <IMAGE>
