Abstract (en)

[origin: CA2428881A1] The present invention is directed to a process for the production of a single- piece woven garment which can be converted into a full-body garment, similar to an overall or a hospital gown, using a minimum number of seams and a minimum amount of cutting. The garment is made a two-dimensional fabric, with the various parts produced as a single piece. Additionally, the garment can include an integrated infrastructure component for collecting, processing, transmitting and receiving information, giving it intelligence capability.
