Abstract (en)
[origin: WO02053863A1] Control system for windows, doors or the like, which comprises a frame (1) and an opening sash (2). The opening sash has mechanisms to secure at least one panel-shaped element (9) in the sash and has a control handle (13) which is connected to mechanisms (15) to secure the opening sash with respect to the frame. The sash comprises two sash elements, whereby the first sash element (3) comprises a groove (4) for receiving an edge of at least one panel-shaped element (9), and whereby the second sash element (6, 6') can be mounted on the first sash element (3) to secure at least one panel-shaped element. The control handle (13) is at least partially housed in said second sash element (6, 6'), and connections (14) from the control handle to said mechanisms (15) for securing the opening sash are at least partially contained in said second sash element (6, 6').
