Abstract (en)

[origin: WO02054128A1] The invention concerns a method and a device for securing an optical component to a mechanical structure. The technical field of the invention is the production of optical systems based on optical fibres. The invention is characterised in that it consists in: engaging said component (2) into a deformable frame (3), then deforming said frame (3) to secure it to said component (2), and maintaining the frame (3) in deformed state with a ring (4) enclosing the frame (3).
