Abstract (en)

[origin: WO0133408A2] A user interface for presenting travel itineraries to a user includes an itinerary region for displaying travel itineraries and a filter region. Each travel itinerary has a corresponding value for a first travel criterion and the travel itineraries are grouped into categories based on the values of the first travel criterion. The filter region includes a plurality of cells, each of which is associated with one of the categories of travel itineraries. When a user selects a cell, the itinerary region displays only travel itineraries in the category associated with the selected cell.
