Abstract (en)
[origin: EP1356855A1] A filter for reducing leukocytes and platelets from an erythrocyte preparation or a whole blood preparation which is characterized by having a filter base coated with a polymer, the content of the polymer being from 0.5 to 10 mg/m² per unit area of the total surface of the filter base, and the polymer containing 20% or less of low-molecular weight components having a molecular weight not more than 1/4 of the peak top molecular weight in the gel permeation chromatogram. <IMAGE>
