Abstract (en)

[origin: EP1357037A1] Feed arrangement (1) for feeding packaging material used in the packaging of small objects comprises a feed wheel (2). A number of object-receiving units (10) and a number of packaging-receiving units (20) are arranged on the feed wheel. Each packaging-receiving unit has at least one first holding device (25, 26) for a first packaging material and at least one second holding device (26, 27) for a second packaging material. An Independent claim is also included for a process for feeding packaging material used in the packaging of small objects. Preferred Features: The feed wheel is a rotating head rotating about a main axis of rotation. A number of object-receiving units are arranged alternately with the same number of packaging-receiving units on the feed wheel around the main axis of rotation.
