Abstract (en)

The present invention relates to an apparatus for bringing bottles to a desired temperature in a bottling plant. More particularly, the invention concerns an apparatus in which the bottles are conveyed in alignment through a heating/cooling zone, so that the order of the bottles leaving said heating/cooling zone is the same as that of the bottles entering said zone. The invention is especially applied as an apparatus for heating cold bottles, of a kind intended for use in a bottling plant before a labelling machine. <IMAGE>
