Abstract (en)
The invention described in this paper introduces a new aseptic packing technology for plastic bottles made of PET, PE, PEHD, polypropylene or other hygienically compatible plastics. In order to apply this technology to aseptic product packing lines, a special system configuration of the product packing machine is required: an aseptic room (C1,C2) is to be created inside the machine, where sterile air (E) constantly flows into. Its structure consists of one stationary section (B) and one rotation section (A) whose special configuration create a volume where the bottle filling process takes place. <IMAGE>
