Abstract (en)
The present invention relates to a relay block (10) comprising: a block body (11) having an internal part equipped with a terminal housing (13) which houses first contact terminals (14); at least one guiding part (20) comprising a relay-insertion opening (21) through which a relay (30) with second contact terminals (32) can be introduced into said block body (11), said second contact terminals (32) being engageable with said respective first contact terminals (14) with a gripping force therebetween by introducing said relay (30) into the interior of said guiding part (20) through said relay-insertion opening (21). According to the invention, the relay block (10) further comprises at least one tool-introduction part (26 ; 42) provided in said guiding part (20), the frontier between said relay (30) and said terminal housing (13) being accessible through said tool-introduction part (26 ; 42).
